

Automatic Transmissions kit (MTK)

Reduce friction and power loss through the transmission, ease gear changes, remove sludge and deposits.

The ECO-Power Automatic Transmission Kit developed by RE-Motive is a carefully matched additive and cleaning products designed to work in harmony with each other giving enhanced benefits over traditional additives.

The kit consists of 2 separate components which when used together will provide the following benefits:-

Immediate benefits include

- ✓ Safely removes varnish deposits.
- ✓ Prepares transmission for new fluid.
- ✓ Cleans all internal transmission components.
- ✓ Cleans and protects the system by means of detergents and dispersants.
- ✓ Smoothens and quietens gear changes.
- ✓ Prolongs component life.
- ✓ Restores optimal gear shifting.
- ✓ Rejuvenates rubber seals and O-rings.
- ✓ Eases gear changes.
- ✓ Prevents ageing and oxidation of automatic transmission fluids.
- ✓ Prolongs component life.
- ✓ Stops and prevents leaks.

The ECO-POWER Automatic Transmission kit procedure should be performed during every gearbox oil change (at least every 75,000 miles or as manufacturer instructions) to ensure the optimum performance. The procedure itself takes only a few extra minutes when performed in conjunction with a standard oil change/service.

- ✓ Recommended when changing ATF of automatic gearboxes or when experiencing shifting problems.
- ✓ Can be added to all conventional ATF fluids meeting Dexron II, III or VI, Ford, LHM or equivalent specifications.
- ✓ Also for power steering systems containing ATF fluid.
